

NEW V-PLOW VDP2504 FOR SUV, LIGHT TRUCK AND TRACTOR

New VDP2504 snow plow for SUV, light truck and small tractor. Thanks to the **unique „noise reducing” blade holders**, is the new VDP snow plow perfect for working in towns or in villages, for cleaning **light traffic roads, parking lots, sidewalks and other narrow roads**.

STANDARD EQUIPMENT:

- Patented polyurethane blade holders that copy the road surface
- New low weight parallelogram
- Two-part moldboard
- Mountings for vehicle or tractor
- Hydraulic hoses and quick connection 1/4 " "male" (for tractors)
- Pivot cylinders (2 pcs) and a lifting cylinder (1 pcs) – no lifting cylinder is required for tractors
- Adjustable blade angle
- Safety markings
- High wear resistant polyurethane colour, Meiren yellow

EXTRA EQUIPMENT:

- Hydraulic pump, additional valves and remote control
- Plow lights with frame
- Rubber or steel blades

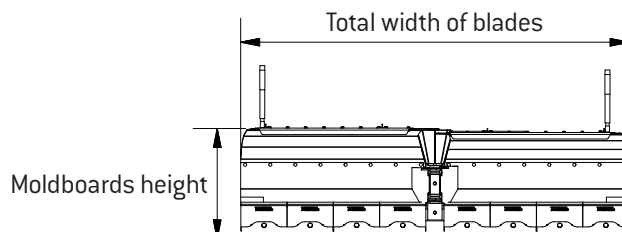

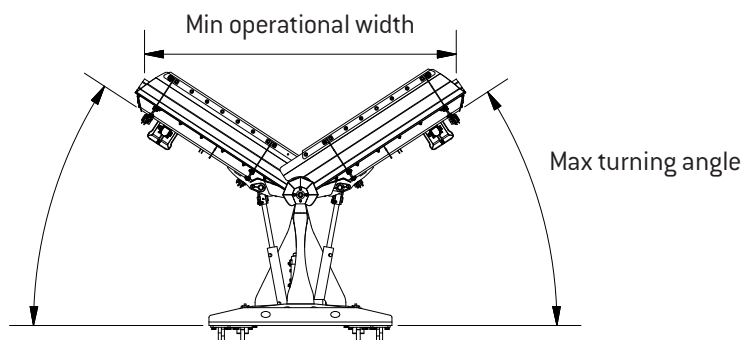

Push your limits ...

TECHNICAL SPECIFICATIONS:

VDP2504

- Width of blades (depends on the turning angle): 2 143 mm – 2 563 mm
- The cutting angle of blades in relation to the ground surface (steel blades): 75° (aggressive) or 90°
- The cutting angle of blades in relation to the ground surface (rubber blades): 100° (passive)
- Number of segments: 4× 608 mm
- Number of blade holder segments: 8× 305 mm (polyurethane)
- Moldboards height (blades included): 732 mm
- Max turning angle (both directions): 34°
- Weight with standard equipment: 205 kg

Main advantages of the new VDP2504 snow plow:

- **Clean working trail** – Our patented polyurethane blade holders copy the road surface and provide cleanest possible working trail.
- **Reliability** – The snow plow is equipped with polyurethane blade holders that smoothly run over an obstacles as manhole covers. This reduces damage and the maintenance costs for the plow.
- **Low noise** – Thanks to polyurethane blade holders the plow works silently, as the noise from the steel blades is not transferred to the mouldboard.
- **Adjustable blade angle** – The angle of the blades (in relation to the ground) can be adjusted. In case of steel blades we recommend to use an aggressive 75° degree angle, with rubber blades use passive 100° angle.
- **Easy to use** – The snow plow is operated easily from the cabin, using a joystick.
- **Economical** – Coping the road surface and the smooth over run of the obstacles, guarantee a more efficient working process as clean work trail, possibility to use less salt, reduced fuel consumption and maintenance costs.
- **Universal applications** – The snow plow is suitable for SUV (with parallelogram), light trucks and tractors.
